

Green city solutions

Sao Paulo dehydrates; the city/state suffers because of a water crisis. Which green city solutions can improve the city?

Objective Members of the LinkedIn discussion group ‘**Sao Paulo is running out of water**’, come from all over the world. They all have large networks and want specialized people in their network to get involved in order to get more knowledge, power and world wide support and tackle this world issue of increasing dehydration.

Sergio Correa de Jesus **Measurement**

MFA Periods of unpredictable drought have become more frequent, air humidity has dropped in average, but in other occasions the opposite is true and we suffer torrential, devastating rains and floods. Climate is now unbalanced, different, unpredictable. The city ought to urgently take drastic measures to become more resilient!

Maria Alice van Genne- **Recollect, recycle, reuse**

Bogado Fernandes In the cities, we could apply all the techniques that exist to improve the water quality of our rivers, recycle used water and, of course, collect the rain that falls on our cities. Nothing can be neglected

Julie ann Futcher **Avoid waste(water) in rivers**

It’s not just collecting/managing the water - BUT keeping stuff off the streets and out of the water I've seen, as I am sure many have, the river Tietê glowing green after heavy rain, and full of floating waste washed off the streets.... this is all part of the cycle that needs to change
